ULTIMA OIL

A. ULTIMA PREMIUM BLEND STRAIGHT WEIGHT ENGINE OILS

Ultima Engine Oils have been specifically engineered to provide protection for all 4 Stroke Engines even in the most extreme temperature environments. Ultima Oils carry one of the best Anti wear packages available for maximum performance and longer engine life. All of our Premium Blend motor oils are produced using “severe hydro-cracked” low volatility base oils. This process produces base oils that are as clear as water, provide high natural resistance to oxidation and thermal breakdown; resist sludge formation and combat corrosive acids from fuel combustion better than less expensive hydro-treated base oils. Straight weight Motor Oils are recommended for use in Engines where higher ambient temperatures are experienced and in older cast iron cylinder engines requiring high thermal stability. **Exceeds all known motorcycle manufacturers warranty requirements including API SF,SG,SH,SL and JASO MA and does not void new vehicle warranty. Check manufacturer’s recommendation for viscosity and change interval.**

BENEFITS INCLUDE

- High Zinc additive resists wear and provides exceptional load carrying characteristics
- Resist high temperature oxidation and deposit formation
- Strong detergents keep engine cleaner

103-110	Ultima Oil 50W	SOLD EACH/CASE BOX IS 12PC
103-111	Ultima Oil 60W	
103-112	Ultima Oil 70W	

B. ULTIMA PREMIUM BLEND MULTI VISCOSITY 20W50 SYNTHETIC BLEND

Ultima 20W50 Premium Blend Oil is a Synthetic Blend specifically engineered to provide outstanding service as a **4 Stroke Engine Oil, Primary and Transmission Oil**. This premium synthetic blend motor oils is produced using “severe hydro-cracked” low volatility base oils mixed with pure synthetic base oils producing a higher resistance to oxidation and thermal breakdown than conventional base oil technology is capable of. Our advanced multi-grade should be used in all Air Cooled engines where high temperature or high stress applications might occur. It will maximize power transfer performance, provide critical protection against ring wear and piston scuffing and offers excellent reserve alkalinity to absorb acids that degrade clutch material and performance.. **Exceeds all known motorcycle manufacturers warranty requirements including API SF,SG,SH,SL and JASO MA and does not void new vehicle warranty. Check manufacturer’s recommendation for viscosity and change interval This Oil is recommended by Ultima for protection during break in periods on all Ultima Brand Engines.**

BENEFITS INCLUDE

- High Zinc additive resist wear and provides maximum load carrying characteristics
- Higher resistance to oil oxidation and deposit formation than conventional oils
- Strong detergents keep engine cleaner , even at elevated temperatures
- Formulated to resist extreme sheer stress imposed by transmission gears when used as transmission oil and includes proper friction modifiers to provide wet clutch protection and clutch control.
